

OUR STONE-PELTED PLANET

What are meteorites?

Where do meteorites come from?

Why are meteorites valuable?

What is the mystery surrounding the great Siberian meteorite?

When do meteorites fall?

This fascinating book tells all about meteors and meteorites, and is lavishly illustrated with photographs of interesting specimens of the several types — iron, stony, and combinations of the two — and with maps showing the locations of falls all over the world.

BY

H. H. NININGER

How can meteorites be recognized?

How hot are falling meteorites?

What is the danger from falling meteorites?

Where is the Meteor Farm?

How do meteorites differ from terrestrial molten rocks?
