# THE METALLOGRAPHY OF METEORIC IRON

BY

STUART H. PERRY

UNITED STATES  
GOVERNMENT PRINTING OFFICE  
WASHINGTON : 1944

---

For sale by the Superintendent of Documents, U. S. Government Printing Office  
Washington, D. C. - Price 60 cents

# CONTENTS

	Page
Preface .....	III
I. Introduction .....	1
Historical .....	1
Macroexamination; etching .....	2
Microexamination .....	2
II. General types of meteoric iron .....	4
Hexahedrites .....	4
Octahedrites .....	4
Ataxites .....	6
Transitional forms .....	7
Proportions of types .....	7
Interpreting structures .....	8
Analyses .....	9
III. Primary constituents of meteoric iron .....	10
Kamacite .....	10
Taenite .....	14
Plessite .....	15
IV. Accessory constituents of meteoric iron .....	17
Troilite .....	17
Daubréelite .....	18
Schreibersite .....	18
Carbon .....	21
Cohenite .....	21
Oxides .....	24
Silicates .....	25
Minor constituents .....	25
V. Artificial irons .....	25
Iron and its alloys .....	26
Phases of pure iron .....	26
Thermal critical points .....	27
Hysteresis .....	28
VI. Alloys .....	28
Solid solutions .....	28
Solidification of alloys .....	29
Eutectics; eutectoids .....	29
Phase changes in alloys .....	30
VII. The iron-carbon system .....	32
The iron-carbon diagram .....	32
Martensite .....	35
Troostite; sorbite .....	35
Pearlite in meteorites .....	36
VIII. The iron-nickel system .....	36
Differences in transformation .....	36
Early iron-nickel diagrams .....	37
The supposed eutectoid .....	38
The composition of taenite .....	39

	An eclectic iron-nickel diagram.....	40
	Comparisons with the iron-carbon diagram.....	41
	Hysteresis increased.....	42
	A meteoric iron-nickel diagram.....	43
	Bradley and Goldschmidt's diagram.....	44
IX.	Meteoric nickel-iron.....	45
	Structural changes.....	45
	The trias summarized.....	47
	Crystallization in meteorites.....	48
	Granulation.....	49
	Composition of kamacite.....	51
X.	Hexahedral structures.....	52
	Classification.....	52
	Neumann lines.....	53
	Taenite and plessite.....	53
	Transitional types.....	54
XI.	Octahedral structures.....	54
	Genesis of the Widmanstätten structure.....	54
	Fineness of octahedral structure.....	56
	Vogel's theory.....	57
	A low-temperature equilibrium.....	59
	Cosmic heatings.....	60
	Transformation structure.....	60
	"Spotted" taenite and kamacite.....	61
	The "ragged" structure.....	62
	Granular octahedrites.....	63
	An anomalous iron.....	63
	Transitional octahedrites.....	64
XII.	Plessite; nickel-rich ataxites.....	65
	Genesis of plessite.....	65
	Vogel's views.....	66
	A two-phase structure.....	67
	The nature of kamacite needles.....	68
	Recapitulation.....	69
	Spheroidized taenite in plessite.....	69
XIII.	Heat alterations.....	70
	Artificial heating.....	71
	Natural reheating.....	71
	Nickel-poor ataxites.....	75
	Cosmic thermal changes.....	76
XIV.	The role of phosphorus in meteoric iron.....	77
	Schreibersite.....	77
	Phosphide in taenite.....	78
	Schreibersite and troilite.....	78
	Diffusion of phosphide.....	78
	Iron-phosphide eutectics.....	79
	Effects on phase transformations.....	80
	Genesis of phosphide inclusions.....	81
	Phosphorus and plessite.....	81
	Studies on the Cape iron.....	82
	References.....	83

XV. Carbon and sulphur in meteoric iron.....	83
Martensite and troostite.....	83
Instances of Fe-C structures.....	84
Ferrous sulphide.....	86
Reichenbach lamellae.....	87
Expansion of troilite.....	87
Swathing kamacite.....	87
XVI. Neumann lines and deformations.....	88
Occurrence.....	88
Neumann lines and slip bands.....	89
Origin.....	89
Resemblance to gamma twinning.....	90
Manner of formation.....	90
Thermal alteration.....	91
"False" Neumann lines.....	92
Deformations.....	92
Causes of displacements.....	92
Evidence of air pressure.....	93
XVII. Metallographic techniques.....	93
Specimens for study.....	93
Macroexamination.....	94
Macroetching.....	95
Micropolishing.....	96
Microetching.....	97
Preserving specimens.....	101
Microexamination.....	101
Photography.....	102
Other methods of study.....	103
XVIII. Bibliography.....	105
Systematic treatises.....	105
Descriptions and studies.....	106
Catalogs and lists.....	107
Bibliographies; current literature.....	107
Illustrations.....	108
Metallography.....	108
X-ray analysis.....	109
Literature cited.....	109
Plates.....	114
Index.....	199

---

 TEXT FIGURES

1. Solidification of pure iron.....	27
2. Schematic equilibrium diagram.....	31
3. The iron-carbon equilibrium diagram.....	33
4. Early iron-nickel diagram.....	37
5. Eclectic iron-nickel diagram.....	41
6. Iron-nickel constitution diagram.....	42
7. Bradley and Goldschmidt's iron-nickel diagram.....	44
8. Composition ranges of meteoric irons.....	48
9. The delta-gamma transformation in nickel-iron.....	57
