ISBN 0 521 62143 7 hardback

Contents

Preface	xv
Foreword	xix
1 Cosmic dust: interplanetary dust particles	1
The smallest meteoroids – interplanetary dust particles (IDPs)	1
The zodiacal light	2
A solar connection	3
Lifetime of interplanetary dust particles	3
Density of interplanetary dust particles	4
Comets as sources of interplanetary dust particles	4
Atmospheric collection of interplanetary dust particles	5
Collection of deep sea interplanetary dust particles	8
Impacts close to home – a practical matter	8
Meteors	11
Sporadic meteors	11
Origin of sporadic meteors	11
Shower meteors	12
The Leonid meteor storm	13
Harvesting interplanetary dust particles in the space environment	18
To touch a star	19
Celestial diamonds	19
Celestial silicon carbide	20
Interstellar graphite	21
PAHs in graphite	21
A final word	24
References	25
2 The fall of meteorites	27
Orbits of meteoroids	28
The fireball networks	28
Characteristics of a meteoroid's atmospheric passage	32
The true trajectory	32
Height and angle of descent	32
Meteoroid velocity	33
Atmospheric drag	33
Light phenomena	34
Sound phenomena	36
Electroponic sounds	37
Meteoroids to meteorites: a lesson in survival	39
Ablation	39
The distribution ellipse	40
“Fossil” strewn fields	42

The temperature myth – hot or cold?	42
The final resting place	44
References	46
3 External morphology of meteorites	47
Some general characteristics	48
Falls and finds	48
Density	48
Size	49
Meteorite shapes	50
Oriented meteorites	52
Fusion crust	53
Weathering of meteorites	58
Mechanical weathering	58
Chemical weathering	58
The myth of lawrencite in iron meteorites	61
A weathering scale	63
Terrestrial lifetimes of meteorites	65
“Fossil” meteorites	67
The Brunflo “paleo” fossils	67
The oldest “paleo” iron?	67
A K–T boundary meteorite?	67
References	69
4 Classification of meteorites: a historical viewpoint	71
The early years	72
The Rose–Tschermak–Brezina classification	73
The Prior classification	75
References	77
5 Primitive meteorites: the chondrites	79
Petrologic–chemical classification of the chondrites	81
Cosmic abundances	82
Chemical classification of the chondrites	83
The Van Schmus–Wood criteria for the petrologic–chemical classification of chondrites	86
1. Chondrule texture	86
2. Matrix texture	86
3. Homogeneity of olivine and pyroxene compositions	89
4. Structural states of low-calcium pyroxene	90
5. Degree of development of secondary feldspar	90
6. Igneous glass in chondrules	90
7. Metallic minerals (maximum weight percent nickel in FeNi)	90
8. Sulfide minerals (average nickel in FeS)	90
9. Weight percent carbon	90
10. Water content	91

Shock metamorphism and shock stage classification	93
The Stöffler–Keil–Scott shock classification system	93
S1 – unshocked	93
S2 – very weakly shocked	93
S3 – weakly shocked	93
S4 – moderately shocked	93
S5 – strongly shocked	95
S6 – very strongly shocked	95
Brecciated chondrites	96
Regolith breccias	96
Impact-melt breccia	98
References	100
6 Chondrites: a closer look	101
Chondrite density and porosity	103
Chondrules	106
Chondrule sizes and abundances	106
Chondrule textures and compositions	106
Porphyritic chondrules	108
Granular olivine–pyroxene chondrules (GOP)	110
Nonporphyritic or droplet chondrules	110
The other chondrites	115
Enstatite chondrites (E)	115
“Rumuruti” chondrites (R)	116
Summary	117
References	118
7 Primitive meteorites: the carbonaceous chondrites	119
Ordinary vs carbonaceous chondrites	120
Carbonaceous chondrite groups	121
CI chondrites (C1)	121
A new CI chondrite?	122
CM chondrites	123
Are CI and CM chondrites related to comets?	125
CV chondrites	128
Matrix	128
Chondrules	129
Olivine aggregates, dark inclusions	131
Calcium–aluminum inclusions (CAIs)	131
CO chondrites	135
CK chondrites	136
CR chondrites	138
CH chondrites	139
Organic carbon	140
Summary	142
References	143

8 Differentiated meteorites: the achondrites	145
Major characteristics of differentiated meteorites	146
Differentiation	147
Fractional crystallization and the igneous process	148
Asteroidal achondrites	151
The HED association	151
Eucrites	151
Diogenites	153
Howardites	156
The mesosiderite connection	157
Aubrites – the enstatite achondrites	159
Ureilites	161
Angrites	162
Brachinites	163
Primitive achondrites	165
Acapulcoites and lodranites	165
Winonaites	165
Martian meteorites – the SNC group	166
Shergottites	166
Nakhlites	167
Chassignites	168
Origin of the SNC meteorites	170
The saga of martian meteorite ALH 84001	172
Lunar meteorites – lunaites	175
History's lesson	176
Baldwin's Moon	177
A history of discovery	177
Anorthositic regolith breccias	178
Mare basalts	179
References	182
9 Differentiated meteorites: irons and stony-irons	183
Mineralogy of meteoritic iron–nickel	184
Crystal structure of meteoritic iron–nickel minerals	185
Iron–nickel stability phase diagram	185
Formation of the Widmanstätten structure	187
Classification of iron meteorites	190
Structural classification of iron meteorites	190
Hexahedrites (H)	190
Octahedrites (O)	190
Ataxites (D)	191
Anomalous irons	191
Chemical classification of iron meteorites	191
Chemical vs structural classification	197
Silicate inclusions in iron meteorites	199
Cooling the core	201
Stony-irons: the pallasites	203

Texture	203
Composition and classification	203
Formation of pallasites	205
Metallic inclusions in iron meteorites	207
Swathing kamacite	207
Troilite	207
Schreibersite	208
Cohenite	209
Graphite	209
References	212
10 Meteorites and the early Solar System	213
Radioisotopes – some basics	215
Decay constant and half-life	216
Rubidium/strontium method	217
Types of meteorite ages	218
In the beginning	220
The solar nebula	221
The first-condensed refractory minerals	224
Formation of the first chondrules	226
Multiple melting and recycling of chondrules?	227
The age of the Solar System	234
Aluminum-26 and the age of chondrules and CAIs	234
Absolute age of the Solar System	236
Impact metamorphism	236
Cosmic-ray exposure ages	237
Terrestrial age	238
References	239
11 Asteroid parent bodies	241
The asteroid belt	242
Titius–Bode Rule	242
Discovery of the first asteroids	242
Modern discoveries	243
Numbering and naming asteroids	243
Main belt asteroids	246
Trojan asteroids	247
Near-Earth and Earth-crossing asteroids	247
Asteroids as parent bodies of meteorites	249
Meteoroid orbits and the asteroid belt	249
Classifying asteroids through infrared reflectance spectrophotometry	249
Distribution of asteroid types	250
Matching meteorites with parent asteroids	252
C-type carbonaceous asteroids	252
S-type asteroids and ordinary chondrites	252
M-type metal asteroids	254
Physical characteristics of asteroids	255
Space weathering	256

Onion shell vs rubble pile asteroid models	256
Asteroid 4 Vesta and HED meteorites	258
Where are the mantle rocks?	259
Close encounters: flyby of asteroids 951 Gaspra and 243 Ida	260
Finale: NEAR encounter with 433 Eros	262
Flyby of 253 Mathilde	263
NEAR-Shoemaker orbits 433 Eros	263
The final approach	266
References	269
12 Terrestrial impact craters	271
An impact crater misjudged	273
Impact cratering in the Solar System	276
Mechanism of impact cratering	279
Stage 1: contact/compression	279
Stage 2: excavation	279
Stage 3: modification	281
Effects of changing parameters on crater size	281
Morphology of impact craters	285
Simple craters	285
Complex craters	285
Criteria for the definitive recognition of terrestrial impact structures	291
Surface structures	291
Remnants of the meteorite	291
Shatter cones	292
Impactites	293
Coesite and stishovite	296
Shocked minerals	297
Catastrophic impacts on Earth	300
The Tunguska event	300
When catastrophism had its day	301
The Chicxulub crater	304
Asteroid or comet?	305
The Permian–Triassic extinction	305
References	306
Appendices	
Appendix A Classification of meteorites (A.E. Rubin, 2000)	307
Appendix B Formation ages of selected meteorites	309
Appendix C Minerals in meteorites	311
Appendix D Preparing and etching iron meteorites	315
Appendix E Testing a meteorite for nickel	319
Appendix F Meteorite museum collections and selected research facilities	321
Appendix G Known terrestrial impact craters	325

Appendix H Summary of meteorites by classification (compiled by Bernd Pauli, June 2001)	331
Glossary	341
General index	349
Meteorite index	353
